# colours unlimited

Ciba® COLIBRI™ product line –  
colour-matching software and services

KONICA MINOLTA

## cooperative

Two world-renowned companies, both recognised for innovation and expertise in their own field have come together to merge the unparalleled colour skills of a leading pigment maker with the technological know-how of a foremost supplier of optoelectronic sensing hardware. The result of this cooperation is Ciba® COLIBRI™ – a unique modular colour-matching package which aids users to boost both productivity and sales and to reduce costs – and which enjoys the powerful backing of an international strategic support network. Created by Ciba® Color Services and Konica Minolta to bring more colour to your life.

## committed

We are committed to helping drive our customers' business performance by giving them a one-stop colour management solution that can be tailored to specific applications and can grow with changing needs. Our modular system caters for the entire spectrum of colour matching, correction, archiving, dispensing and quality control functions. Our experienced colour consultants carefully analyse requirements in respect of applications and workflow in order to develop exactly the package that best suits your particular business. The on-screen display of

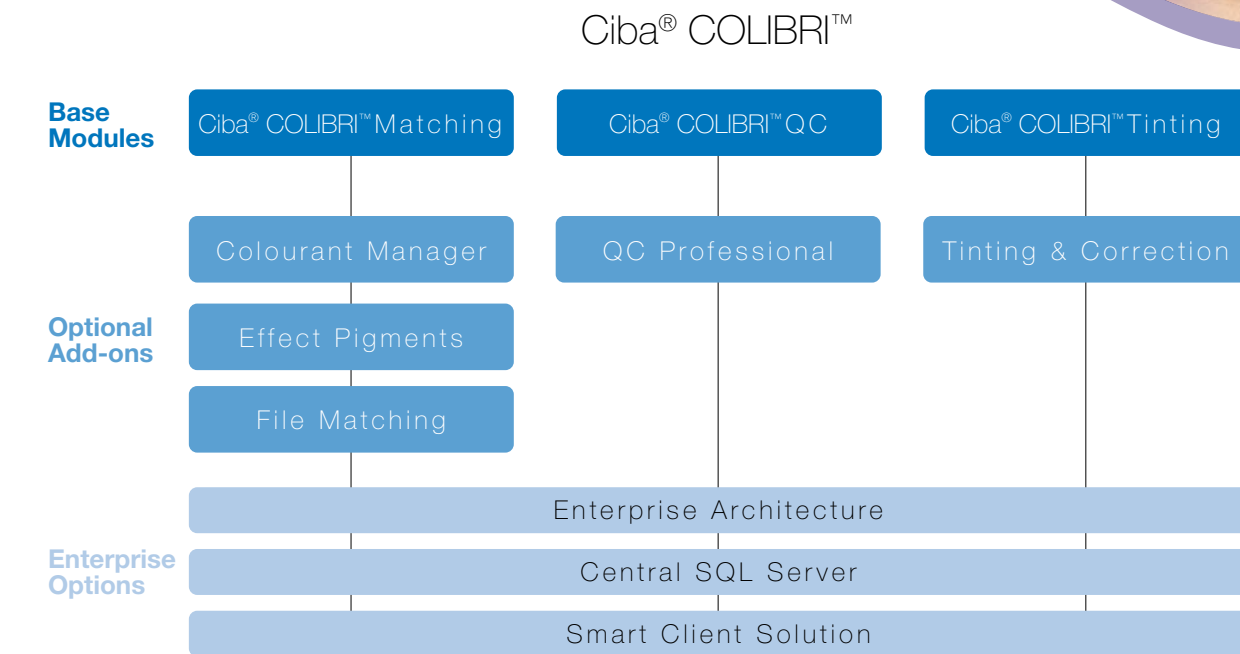

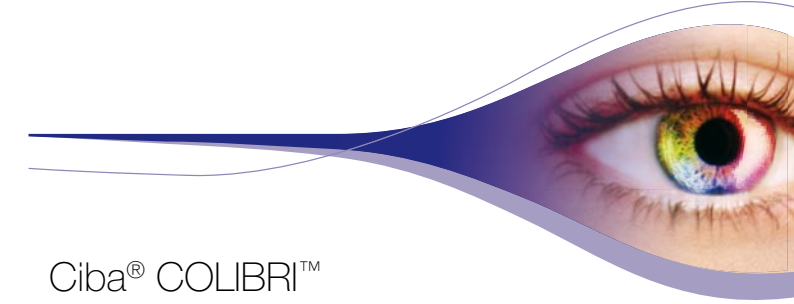

colours over specific substrates provides realistic visualisations which save both time and money, while optimised formulations make for further cost savings by avoiding overpigmentation – also an important ecological consideration. In addition, customers have our comprehensive laboratory testing and proofing facilities at their disposal and can call on our extensive pigment databases for turnkey solutions for a fast start-up. Competent after-sales service is guaranteed at the local level by a network of trained engineers throughout the world.

## competitive

The union of cutting-edge optical sensing technology and colour-measuring expertise brought to you by Konica Minolta and Ciba® Color Services allows you to match colours and finetune formulations simply and accurately. The auxiliary binder function lets you work with different binders using only one colourant database thus slashing preparation work, while the template function permits predefinition of software features and screen layout to guarantee seamless and fast handling. All non-required functions are suppressed to make the software fit your workflow with greatly simplified operations. So whether you deal in paints, plastics, fibres, ceramics, coatings or inks, user-friendly Ciba® COLIBRI™ enables you to boost productivity and cut process and manufacturing costs at the same time.

## comprehensive

The Ciba® COLIBRI™ product line comprises a powerful range of modules with an advanced mathematical engine that matches colour and opacity separately to enable the correct formulation of opaque, translucent and transparent colours. The base modules are complemented by a series of optional add-ons with supplementary features and further functions. Straightforward to install, maintain and update, with its attractive and intuitive user interface, Ciba® COLIBRI™ offers fully customisable functionality and feature settings that can be adapted to your specific applications and workflow. The modular design enables you to tailor the system to your requirements as they change with your future growth. "Administrator" and "User" levels can be assigned to control access and guarantee security for sensitive data, while existing databases can be easily migrated Ciba® COLIBRI™ and shared with affiliates around the globe thanks to sophisticated enterprise architecture solutions. Databases are also simple to update via the Internet. Ciba® COLIBRI™ is optimised to work with all table-top and portable spectrophotometer from Konica Minolta, and is available with drivers for many other instrument makers on request. Last but not least,

an unprecedented local presence of specialists is on hand with help and support as and when required. We are happy to provide you with expert services at excellent value when you subscribe to our support and maintenance agreement.
